Summary

Sixth-semester Systems and Computer Engineering student at Universidad del Quindío with a Professional Certificate in Enterprise Full-Stack Development with Spring Boot and Angular. Hands-on experience in backend development with Java and Spring Boot, relational database design, and network and server configuration, including deploying Apache web servers with HTTPS and analyzing their traffic with Wireshark. Comfortable with Git, OpenAPI contracts, and Agile practices. Bilingual: Spanish (native) and English (B2).

Education

Universidad del Quindío — Armenia, Colombia

B.S. in Systems and Computer Engineering | 2024 – Expected 2029 | Currently in 6th semester

- Relevant coursework: Advanced Programming, Databases I, Software Engineering II, Networks and Telecommunications, IT Strategic Management, Vector Calculus.

Institución Educativa CASD — Armenia, Colombia

High School Diploma | 2023

Certifications

- **Professional Certificate in Enterprise Full-Stack Development with Spring Boot and Angular** — Dev Senior Code | Aug 2025

2025

Projects

Tech Park UQ – Theme Park Management System | Java, Spring Boot, Spring Data JPA, H2, React, TypeScript, Tailwind CSS | Team project

- Worked across the full stack (backend, frontend, and database) as part of a team building a platform to simulate and manage a theme park's attractions, visitor flow, and operations, using a layered architecture (REST controllers, services, repositories).
- Built a REST API for attraction management (CRUD) with JPA persistence, consumed by a React + Vite frontend.
- Implemented custom data structures for park operations: graphs, binary search trees, linked lists, and priority queues.

SGA – Apartment Booking Management System | Java, Spring Boot, Gradle, OpenAPI, Git | 2026

- Designed the REST API contract in OpenAPI and implemented response DTOs for apartment details, booking summaries, and pagination.
- Collaborated in a team using Git and Conventional Commits, following documented business rules.

Secure Apache Web Server and Traffic Analysis | Ubuntu Server, Apache, Wireshark | 2026

- Configured basic authentication, two name-based virtual hosts on a single IP, and HTTPS with a SAN certificate and HTTP-to-HTTPS redirection.
- Used Wireshark to show that basic authentication exposes credentials in Base64 and that TLS encrypts them.

Tourism Database Design | Relational modeling, SQL | 2026

- Normalized the schema to third normal form and defined domain, entity, and referential integrity rules.

Blackboard Architecture Pattern Implementation | Python, Java | 2026

- Built a diagnostic system with independent knowledge sources coordinated by a control component, and presented it to the class.

Networking Labs | Cisco Packet Tracer, VirtualBox | 2026

- Configured networks with switches, wireless routers, access points, and DHCP, DNS, and HTTP servers; compared NAT, host-only, bridged, and internal network modes.

Technical Skills

- **Programming:** Java, Python, TypeScript, HTML
- **Frameworks:** Spring Boot, Spring Data JPA, Angular, React, Tailwind CSS
- **APIs and build tools:** REST, OpenAPI, Gradle, Maven
- **Databases:** Relational modeling, normalization, relational algebra, SQL, H2
- **Networking:** TCP/IP, DHCP, DNS, HTTP/HTTPS, TLS, Wireshark, Cisco Packet Tracer
- **Systems and servers:** Linux (Ubuntu Server), Apache, macOS, VirtualBox, UTM
- **Version control:** Git, GitHub
- **Software engineering:** Scrum, user stories, story-point estimation, architecture styles (layered, event-driven, blackboard, pipes and filters)
- **IT management:** IT strategic planning (PETI), Colombian Digital Government policy, MIPG

Languages

- **Spanish:** Native
- **English:** Upper-intermediate (B2)
